

CITY LIBRARY MANAGEMENT SYSTEM

CS631

BY

SAKETAN PATIL(sap254)

MONIK BANSAL(mb788)

TRIMAN KAUR(tk324)

Implementation and Problems Faced

Objective: To develop a menu driven application system for the public library system database.

The following are the webpages been developed:

1. Welcome Page: Reader functions Menu (ask for card number, and then login to Reader Home Page).

Administrative Functions Menu (ask for ID and password, and then login to Admin Home Page).

2. Reader Functions Webpage:

Search a document by ID, title, or publisher name.

Document checkout.

Document return.

Document reserve.

Compute fine for a document copy borrowed by a reader based on the current date.

Print the list of documents reserved by a reader and their status.

Print the document id and document titles of documents published by a publisher.

Logout.

3. Administrative Functions Webpage:

Add a document copy.

Search document copy and check its status.

Add new reader.

Print branch information (name and location).

Print top 10 most frequent borrowers in a branch and the number of books each has borrowed.

Print top 10 most borrowed books in a branch.

Print the 10 most popular books of the year.

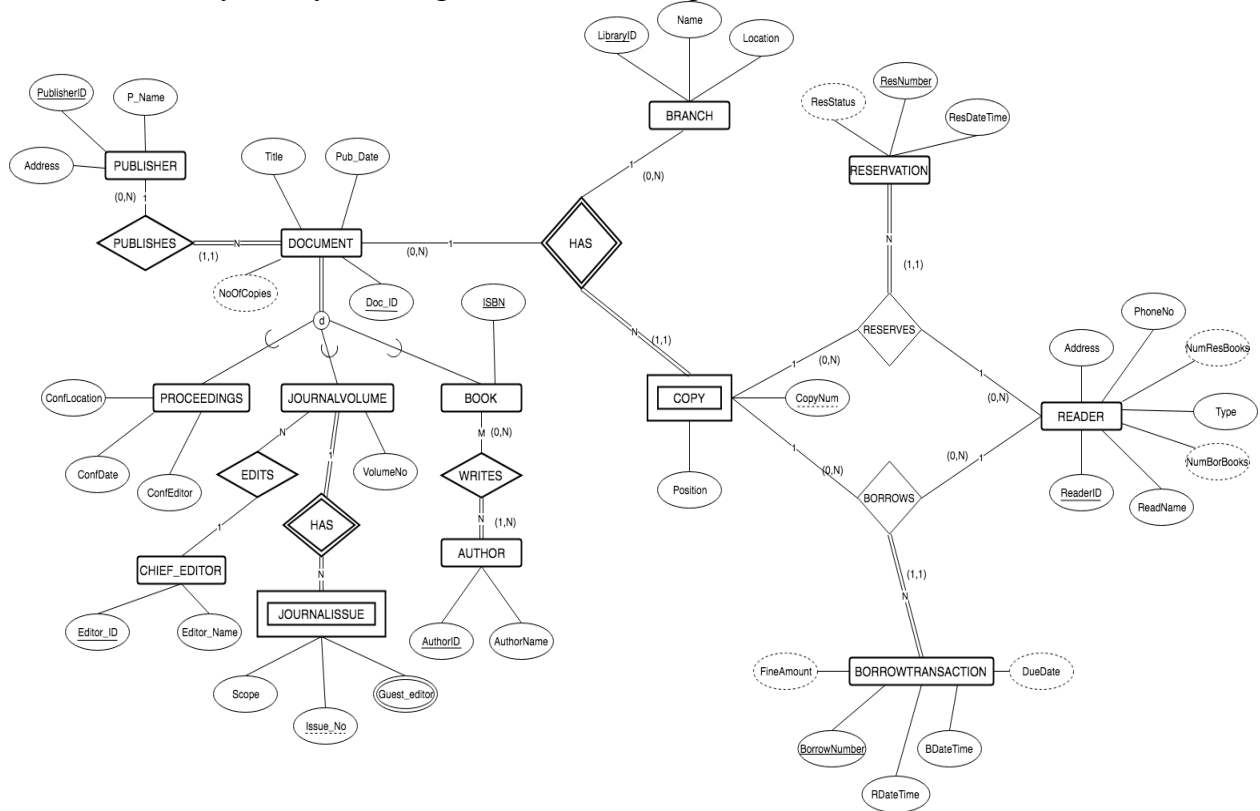

Find the average fine paid per reader.

Logout.

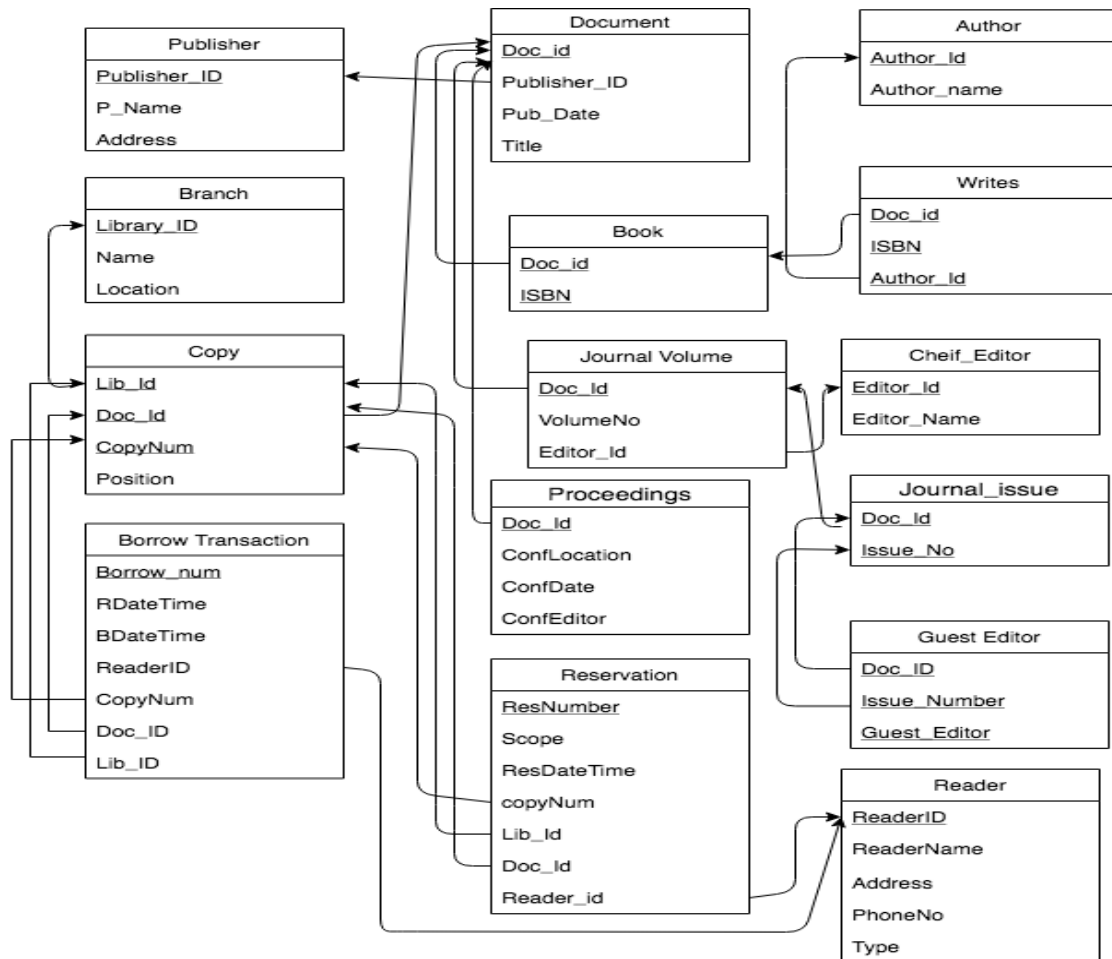

Design of Implementation

The library management system was designed in three phases as follows:

Phase 1: The city library E/R diagram was built using draw.io

Phase 2: the derived EER diagram was designed using draw.io

Phase 3:

The implementation of the final web application was made using MySQL and JavaScript. Database Design and Development is done based on knowledge of Deliverables 1 and 2. Development is then done based on the model developed. Database Creation is done in mysql terminal.

Tools used: Draw.io, Microsoft Word, Eclipse IDE, MySQL Terminal.

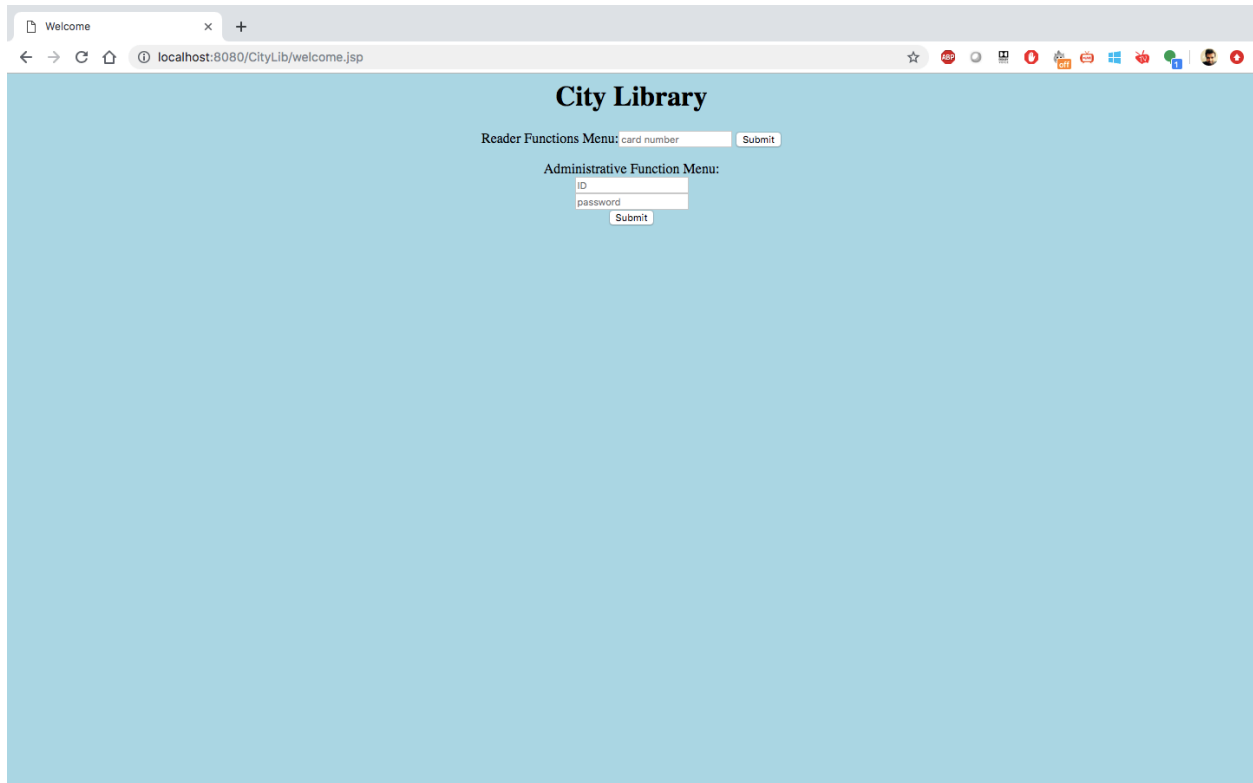

Frameworks Used: JavaScript, HTML.

Problems faced during implementation:

1. JDBC Connection between Eclipse IDE and MySQL
2. Understanding and Monitoring the relationship between various tables of database.
3. Understanding the working of Reserves and Borrows table.
4. A document with publisher ID could be added without populating the publisher table.
5. Validation of data during insertion in tables.
6. There was a confusion between the implementation of documents and copies, so we moved on with maintaining uniformity with just documents in our library system.
7. Data Insertion in Database took time as it is required in sequential manner due to foreign key constraint.
8. Calculation of a Reader Fine in Database after due data i.e. 20 days is not been implemented in backend part of a Application.

Users Guide

Welcome Page:

The screenshot shows a web browser window with the title 'Welcome' and the address bar displaying 'localhost:8080/CityLib/welcome.jsp'. The page has a light blue background and features the 'City Library' logo at the top center. Below the logo, there are two login sections. The first section, 'Reader Functions Menu:', contains a text input field labeled 'card number' and a 'Submit' button. The second section, 'Administrative Function Menu:', contains two stacked text input fields labeled 'ID' and 'password', followed by a 'Submit' button.

Here if the user is Reader, he can login to his profile by entering his Registered Card Number.
If the user is Admin He can login to his profile by providing his login credentials.

Reader Web Page:

Reader Menu

localhost:8080/CityLib/Reader.jsp

Logout

Hi 1

Search

id title publishername Search

Document Checkout

DocID Check Out

Document Return

DocID Return

Document Reserve

DocID Reserve

Check Fine

Document Reserved List

Publisher Information

publishername Search

As seen in Screenshot, this is home Page of a Reader. Reader can perform or check 7 functionalities of a Library mentioned below with the screenshots of output. All these functions are implemented using various SQL commands.

1. Search a document by ID, title, or publisher name.

Query!

localhost:8080/CityLib/Reader_Query_1.jsp?name=1

DocumentID: 35 Title: Name in the Door Publisher Name: Theo Frank
DocumentID: 36 Title: Naked Dreams Publisher Name: Theo Frank
DocumentID: 37 Title: The Red Wings Publisher Name: Theo Frank
DocumentID: 38 Title: Edge of Wind Publisher Name: Theo Frank
DocumentID: 39 Title: The Edge Ship Publisher Name: Theo Frank
DocumentID: 40 Title: The Shadow of the Bridge Publisher Name: Theo Frank
DocumentID: 53 Title: snakes and dogs Publisher Name: Theo Frank

2. Document checkout.

Data inserted and deleted from reserves.

3. Document return.

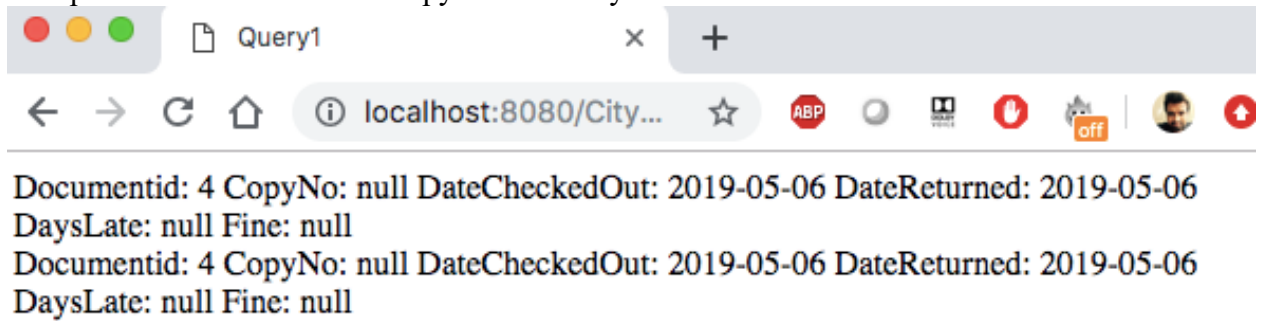

Document Returned.

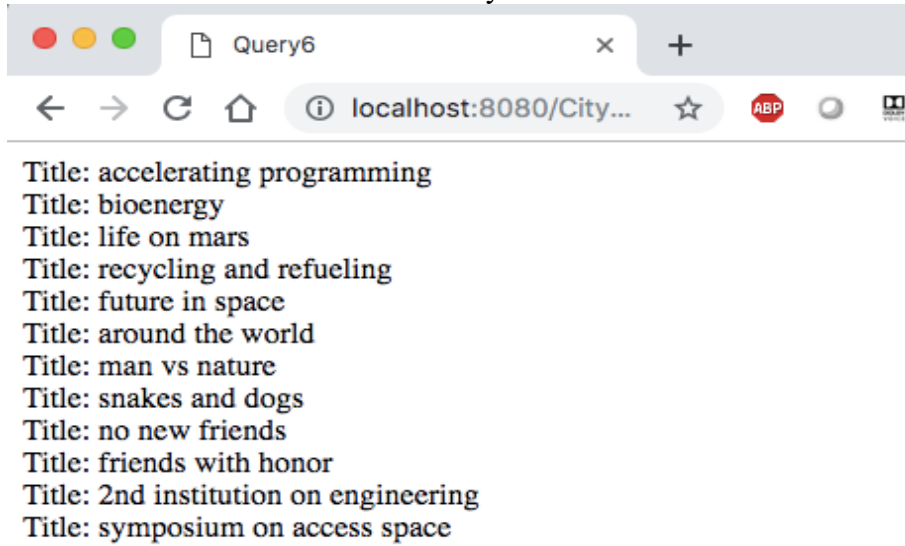

4. Document reserve.

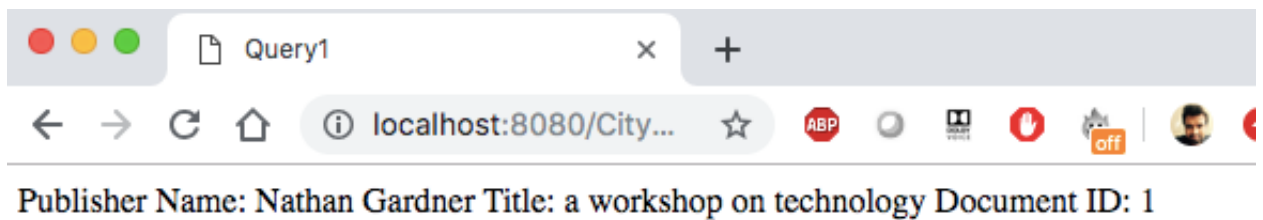

5. Compute fine for a document copy borrowed by a reader based on the current date.

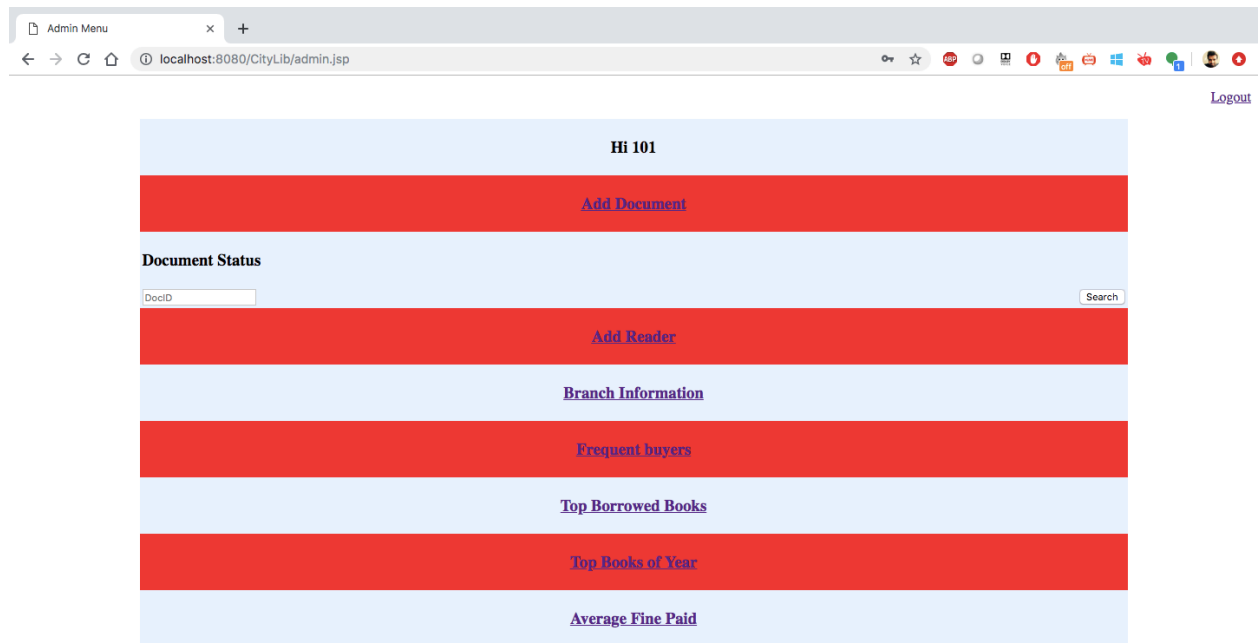

6. Print the list of documents reserved by a reader and their status.

7. Print the document id and document titles of documents published by a publisher.

Admin Home Page:

As seen in Screenshot, this is home Page of a Admin. Admin can perform or check 8 functionalities of a Library mentioned below with the screenshots of output. All these functions are implemented using various SQL commands.

1. Add a document copy.

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/City...'. The page has a light blue background. In the center, there is a form titled 'Enter Document Information Here:'. The form contains three input fields: 'Title', 'Pdate' (with a placeholder 'dd/mm/yyyy'), and 'Publisher Id'. Below the input fields is a 'Submit' button.

2. Search document copy and check its status.

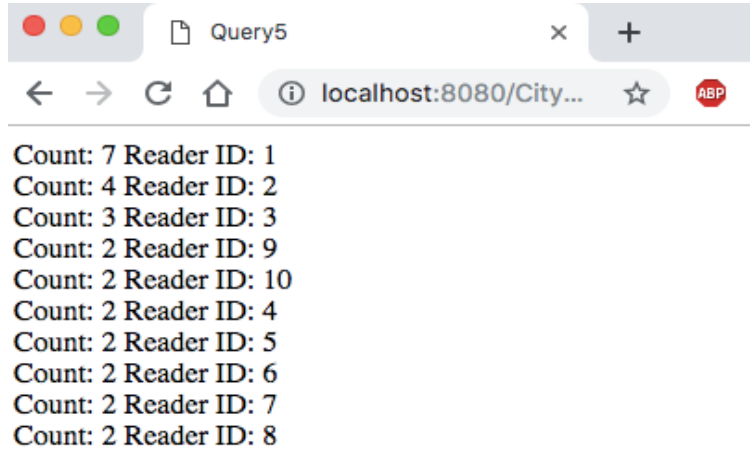

3. Add new reader.

Enter Your Information Here:::	
Reader Id:	<input type="text"/>
Reader Type	<input type="text"/>
Name	<input type="text"/>
Address	<input type="text"/>
Phone:	<input type="text"/>
Membership Data Start:	<input type="text" value="dd / mm / yyyy"/>
<input type="button" value="Submit"/>	

4. Print branch information (name and location).

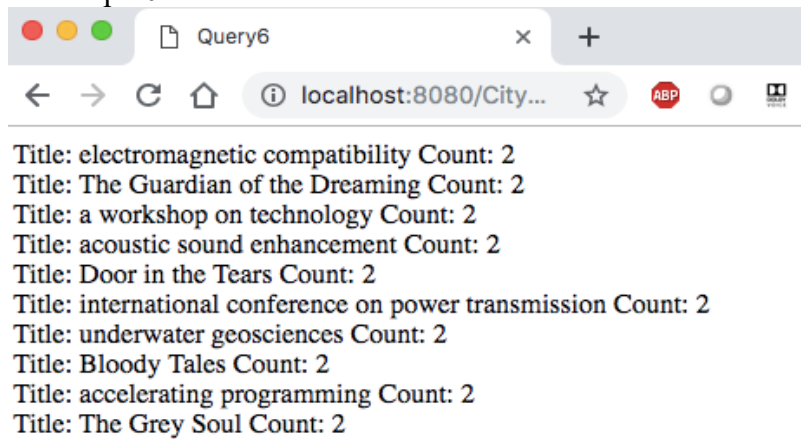

5. Print top 10 most frequent borrowers in a branch and the number of books each has borrowed.

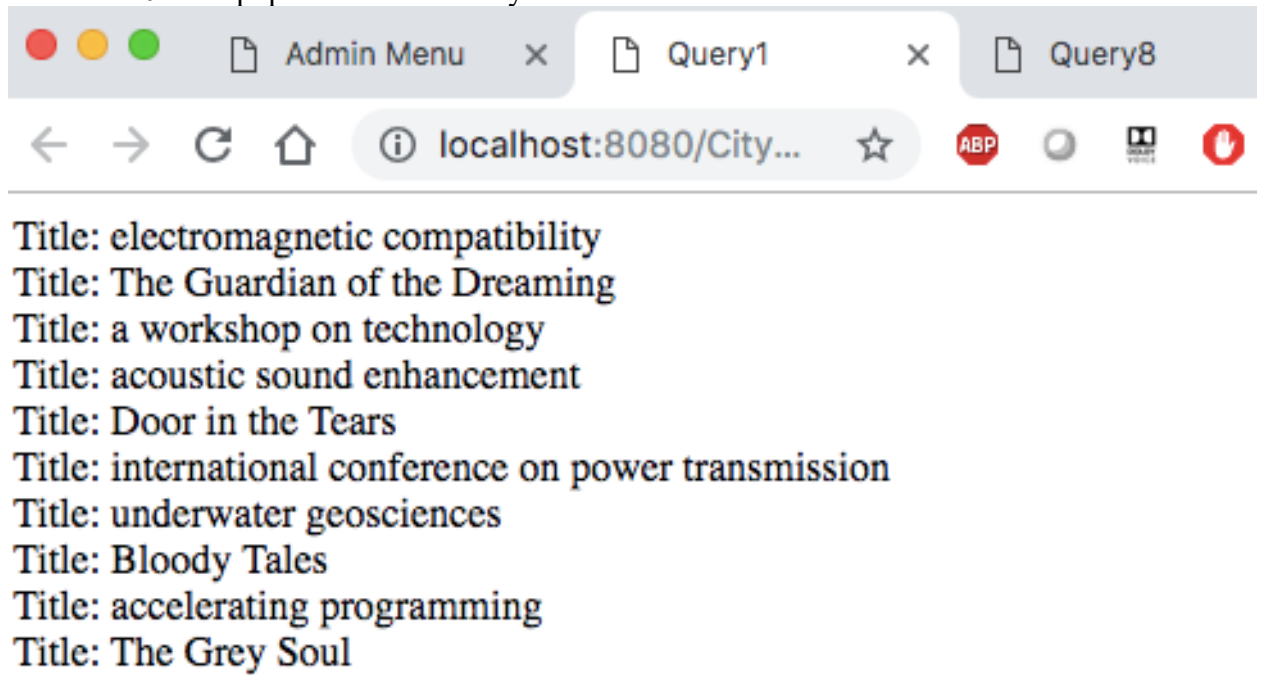

```
Count: 7 Reader ID: 1
Count: 4 Reader ID: 2
Count: 3 Reader ID: 3
Count: 2 Reader ID: 9
Count: 2 Reader ID: 10
Count: 2 Reader ID: 4
Count: 2 Reader ID: 5
Count: 2 Reader ID: 6
Count: 2 Reader ID: 7
Count: 2 Reader ID: 8
```

6. Print top 10 most borrowed books in a branch.

```
Title: electromagnetic compatibility Count: 2
Title: The Guardian of the Dreaming Count: 2
Title: a workshop on technology Count: 2
Title: acoustic sound enhancement Count: 2
Title: Door in the Tears Count: 2
Title: international conference on power transmission Count: 2
Title: underwater geosciences Count: 2
Title: Bloody Tales Count: 2
Title: accelerating programming Count: 2
Title: The Grey Soul Count: 2
```

7. Print the 10 most popular books of the year.

8. Find the average fine paid per reader.

SQL Commands for Creation and Insertion of Database:

```
-- MySQL dump 10.13 Distrib 8.0.16, for macos10.14 (x86_64)
--
-- Host: 127.0.0.1 Database: cityLib
--
-- Server version 8.0.16

```

Query Implementations:

Reader Function Queries:

1. Search a document by ID, title, or publisher name.

```
if(name.equals("") && password.equals("")){
    sql = "select DocID,Title,PubName from Publisher, Document where PubName=? and
Document.PublisherID=Publisher.PublisherID";
}
if(usertype.equals("") && password.equals("")){
    System.out.println("klilll");
    sql = "select DocID,Title,PubName from Publisher, Document where DocID=? and
Document.PublisherID=Publisher.PublisherID";
}
if(name.equals("") && usertype.equals("")){
    sql = "select DocID,Title,PubName from Publisher, Document where Title=? and
Document.PublisherID=Publisher.PublisherID";
}
```

2. Document checkout.

```
String sql=" insert into Borrow_History (ReaderID, DocID, CopyNo, DateCheckedOut,
DateReturned,DaysLate,Fine)"
+ " values (?, ?, ?, ?, ?, ?, ?)";
String sql1="select * from reserves where ReaderId=? and DocID=?";
String sql2="delete from reserves where ReaderId=? and DocID=?";
```

3. Document return.

```
String sql=" update Borrow_History set DateReturned=? where ReaderID=? and
DocID=?";
```

4. Document reserve.

```
String sql=" insert into reserves (ReaderID,DocID,CopyNo,LibID,RTimeStamp) values
(?, ?, ?, ?, ?)";
```

5. Compute fine for a document copy borrowed by a reader based on the current date.

```
String sql=" select * from Borrow_history where READERID=?";
```

6. Print the list of documents reserved by a reader and their status.

```
String sql="select Title from Document, Reserves where Document. DocID = Reserves.
DocID and ReaderID=? ";
```

7. Print the document id and document titles of documents published by a publisher.
String sql="select DocID,Title,PubName from Publisher, Document where PubName=? and Document.PublisherID=Publisher.PublisherID";

Admin Function Queries:

1. Add a document copy.
int i = st.executeUpdate("insert into Document(Title,PDate,PublisherID) values ('" + Title + "','" + PDate + "','" + PublisherID + "')");
2. Search document copy and check its status.
String sql="select * from Borrows NATURAL JOIN Document where DocID= ?";
3. Add new reader.
int i = st.executeUpdate("insert into Reader(ReaderID,RType,RName,RAddress,Phone_Number,MemStart) values ('" + a + "','" + b + "','" + c + "','" + d + "','" + m + "','" + f + "')");
4. Print branch information (name and location).
String sql=" select LName, LLocation from Branch";
5. Print top 10 most frequent borrowers in a branch and the number of books each has borrowed.
String sql= "select count(BorNumber),ReaderID from Borrows,Book where Book.DocID=Borrows.DocID group by Borrows.ReaderID order by count(BorNumber) desc limit 10";
6. Print top 10 most borrowed books in a branch.
String sql="select Title,Count(*) FROM Borrows NATURAL JOIN Document Group By DocID Order By Count(*) DESC LIMIT 10";
7. Print the 10 most popular books of the year.
String sql="select Title FROM Borrows NATURAL JOIN Document Group By DocID Order By Count(*) DESC LIMIT 10";
8. Find the average fine paid per reader.
String sql="select AVG(Fine) AS Fine From Reader";
